## Description :

Prsentation de l'diteurIn LIGHTING ESSENTIALS, Don Giannatti encourages photographers to take a subject-oriented approach to lighting, helping them make better decisions about both the technical and artistic aspects of lighting. What qualities does the subject possess that the light will react with? How will the light react and what will it reveal? etc. Working through a variety of shoots, all amply illustrated, Giannatti shows how he approaches each image, covering lighting tools, the effect of light placement, controlling lighting ratios and much more in this comprehensive book.Prsentation de l'diteurIn LIGHTING ESSENTIALS, Don Giannatti encourages photographers to take a subject-oriented approach to lighting, helping them make better decisions about both the technical and artistic aspects of lighting.
